EDUCATION

Oregon State University <i>M.S. in Computer Science (Accelerated Program)</i>	Corvallis, OR <i>Expected Start: Jan. 2027</i>
Oregon State University <i>Honors B.S. in Computer Science (AI Focus), Minors in Math & Spanish (GPA: 3.9)</i>	Corvallis, OR <i>Sept. 2022 – Dec. 2026</i>

EXPERIENCE

Software Engineer Intern <i>Akido Labs</i> Worked closely the engineering team to design and ship interactive demos, prototypes, and product features that demonstrate how AI can transform clinical workflows	April 2026 – Present <i>Remote</i>
Undergraduate Research Assistant <i>Oregon State University</i> Developed a physics-informed neural network (PINN) to model EEG dynamics in low-data clinical settings, with emphasis on robustness and generalization for real-world applications	Sept. 2025 – Present <i>Corvallis, OR</i>
Academic Tutor <i>Oregon State University</i> Provided personalized tutoring for math and computer science undergraduate courses, adapting teaching methods to individual learning styles and maintaining effective communication with students, fellow tutors, and leadership	Sept. 2023 – Sept. 2024 <i>Corvallis, OR</i>
Undergraduate Engineering Intern <i>Dell Technologies</i> - Contributed to production frontend code within Dell's Client Solutions Group, supporting secure CSP integration and learning enterprise deployment workflows - Collaborated with senior engineers to implement well-scoped changes in a multi-language codebase (Kotlin, Go)	June 2023 – Sept. 2023 <i>Round Rock, TX</i>

PROJECTS

AI Kingdom Game Simulator <i>C#, Python, Unity, Blender</i> GitHub Repo - Developed a fantasy world simulator featuring autonomous NPCs that manage needs & navigate between locations - Implemented modular agent architecture separating NPC state, decision, and memory to support future expansion - Designed original concept art while exploring dynamic relationship systems and AI-driven narrative systems	June 2026 – Present
Mars Rover Autonomous Systems <i>C#, Unity, ROS2, YOLOv11</i> GitHub Repo - Developed autonomy-focused UI features for selecting search targets and configuring autonomous rover missions - Implemented ground station interfaces for visualizing YOLO object detection results, improving operator awareness during mission execution, and maintaining human oversight of autonomous decisions - Integrated mapping, waypoint planning, and mission configuration tools into a unified workflow for rover operators	Sept. 2025 – June 2026
Event Management System <i>SQL, Python, Flask, MySQL</i> GitHub Repo - Designed Flask-based event management application backed by a normalized SQL database, enabling CRUD operations for events, attendees, venues, etc., to promote client acquisition and increase operational effectiveness - Implemented CRUD operations for events, attendees, venues, task assignments, and scheduling, to promote client acquisition and increase operational effectiveness	Jan. 2025 – April 2025

TECHNICAL SKILLS

Languages: Python, C#, C/C++, SQL (MySQL), Typescript, JavaScript, HTML/CSS
Game Development & Tools: Unity, Git, GitHub, Docker, Flask, Node.js, MongoDB, AWS Bedrock, VS Code
Machine Learning: PyTorch, TensorFlow/Keras, scikit-learn, Pandas, NumPy, Matplotlib, Model Evaluation

LEADERSHIP

Digital Design & Social Media Lead <i>Artificial Intelligence Club at Oregon State University</i> Designed custom content with emphasis on branding and identity, increasing social media following by 220+ followers	June 2025 – Aug. 2026 <i>Corvallis, OR</i>
